

<p>Monetary series "PROVINCIA DACIA" in the Roman coinage, Jacek Rakoczy</p>	<p>Coins at Warwick , 2 May 2013</p>
<p>Studia Historica Gedanensia , vol 9, 2018, str.15-25</p>	
<p>PROVINCIA DACIA was a local coinage in the middle and lower Danube area during the 3rd century AD. It mainly circulated in the provinces of Dacia and Pannonia, as suggested by site finds. A close analogy can be established with another roughly contemporary bronze coinage P M S COL VIM (Provinciae Moesiae Superioris Colonia Viminacium), which was issued at Viminacium in Moesia Superior between AD 239 and 257. The research of C. Găzdac suggests that the main role of these coins was to supply the army². The PROVINCIA DACIA coin series can therefore be closely linked with the military and their need for bronze coinage in Dacia. This hypothesis is supported by site finds from the territory of this province. For example, at the militarised site of Porolisum, 64% of the PROVINCIA DACIA coins minted during the reign of Philip I were retrieved from the territory of the fort³.</p> <p>1 This article is the effect of the realization of the research project no. 2016/B/HS3/02923 financed by the National Science Centre, Poland.</p> <p>2 Cristian Găzdac, "Centre and periphery: The Roman monetary policy regarding the Lower Danube provinces at the mid 3rd century AD", Centru Si Periferie: Lucrarile Colocviului National, Bistratia 23–25 Aprilie 2004 (2004): 71–73.</p> <p>3 Cristian Găzdac, Agnes Alföldy -Găzdac, "The coinage «PROVINCIA DACIA» – a coinage for one Province only (AD. 246–257)?", Acta Musei Napocensis 39 (2002–2003): 247–258.</p>	<p>https://blogs.warwick.ac.uk/numismatics/entry/a_provincia_dacia/</p> <p>PROVINCIA DACIA was a local coinage in the middle and lower Danube area during the 3rd century AD. This hypothesis is supported by site finds from the territory of this province. For example, at the militarised site of Porolisum, 64% of the PROVINCIA DACIA coins minted during the reign of Philip I were retrieved from the territory of the fort (Á. Alföldy-Găzdac, C. Găzdac, The coinage 'PROVINCIA DACIA' – a coinage for one province only? (AD 246-257), in Acta Musei Napocensis, 39-40/I, Cluj-Napoca, Romania, 2002-2003 (2004), p. 247-258).</p>
<p>The legend is inscribed with the emperor's name: IMP(erator) M(arcus) IVL(ius) PHILIPPVS AVG(ustus). The military theme of the reverse is in line with the intended audience for this coinage. It depicts the province of Dacia standing left, between an eagle and a lion. The eagle with a wreath in its beak and the lion are symbols of the legions permanently garrisoned in Dacia, the legio V Macedonica</p>	<p>The legend is inscribed with the emperor's name: IMP(erator) M(arcus) IVL(ius) PHILIPPVS AVG(ustus). The military theme of the reverse is in line with the intended audience for this coinage. It depicts the province of Dacia standing left, between an eagle and a lion. The eagle with a wreath in its beak and the lion are symbols of the legions permanently garrisoned in Dacia, the legio V Macedonica from Potaissa, and the legio</p>

<p>from Potaiassa, and the legio XIII Gemina from Apulum. Moreover, the olive branch, the curved Dacian sword (phlax), and the standard inscribed D(acia).</p>	<p>XIII Gemina from Apulum. Moreover, the olive branch, the curved Dacian sword (falx), and the standard inscribed D(acia) F(elix) are also of a military character. Finally, the legend on the reverse is inscribed PROVINCIA DACIA.</p>
<p>The importance of this coin, struck in the first year of the local era, is suggested by the high volume of this coinage in Dacia during the reign of Philip I (estimated by C. Găzduc at almost 40%4), and by its intended audience.</p> <p>4 Cristian Găzduc, Monetary circulation in Dacia and the provinces from the Middle and Lower Danube from Trajan to Constantine I (AD 106–337) (Cluj -Napoca: Nereamia Napoca, 2002), 431.</p>	<p>The importance of this coin, struck in the first year of the local era, is suggested by the high volume of this coinage in Dacia during the reign of Philip I (estimated by C. Găzduc at almost 40%), and by its intended audience. The mint where this specimen was struck remains debatable. However, recent scholars have provided convincing arguments for Apulum.</p>
<p>The mint in the Roman province of Dacia struck coins very similar to those issued at Viminacium. Through this similarity some scholars think that coins bearing the legend PROVINCIA DACIA were struck in the mint of Viminacium. Because of the variations of style, the spreading pattern as well as the differences in the local dating in accordance to the well-known imperial chronology, the coins are recently assumed to have been minted somewhere in the province of Dacia itself. This mint was probably erected with the help from personnel from the Viminacium mint. The most logical choice for its location seems to be the town of Sarmizegetusa. The Roman colony Ulpia Traiana Augusta Dacica Sarmizegetusa was built during the reign of Traian about 40 km far from the old Dacian capital called Sarmizegetusa. It has grown into very important Roman center and become the headquarters of the concilium Daciarum trium, the government of the three parts of Roman Dacia (Dacia Porolissenis, Dacia Superior and Dacia Malvensis). Another place that could have been probable location of the mint is the colony Aurelia Apulensis (Apulum – Alba Iulia). Apulum was one of the biggest Roman towns in Dacia and also the place where the legio XIII Gemina stationed. Today the remnants of these places are located in modern Romania.</p>	<p>http://www.viminacium.nl/English%20Introductie%20Dacia.html</p> <p>The mint in the Roman province of Dacia struck coins very similar to the coins struck in the mint of Viminacium. Because of this similarity some scholars think that the coins bearing the legend PROVINCIA DACIA were struck in the mint of Viminacium. Because of differences in style, the spreading of the coins, the difference in the local dating on the coins and the known imperial chronology it recently is assumed that there must have been a mint somewhere in the province of Dacia itself. This mint probably was erected with help from personnel from the mint at Viminacium. The most logical choice for the location of the mint seems to be the town of Sarmizegetusa. The Roman colonia Ulpia Traiana Augusta Dacica Sarmizegetusa was built during the time of the emperor Traian some 40 km from the old Dacian capital Sarmizegetusa. It had grown into a very important Roman town and was the seat of the concilium Daciarum trium, the government of the three Dacia's. From here the three parts of Roman Dacia were governed (Dacia Porolissenis, Dacia Superior and Dacia Malvensis). Another place that could have been the location of the mint is the colonia Aurelia Apulensis (Apulum - Alba Iulia). Apulum was one of the biggest Roman towns in Dacia and the home of the legio XIII Gemina. Today the remnants of these places lie in modern Romania.</p>

<p>The coinage of PROVINCIA DACIA started during the reign of the emperor Philip I (244–249). The formation of the Roman colony Viminacium along with its right to strike coins was actually the reason for the introduction of coinage at Viminacium. However Sarmizegetusa as well as Apulum had already the status of colony, namely the motive for striking this type of coins in Dacia must have been a different one.</p>	<p>The coinage of the PROVINCIA DACIA coins started during the reign of the emperor Philip I (244-249). A reason for the coinage in Viminacium had been the elevation of the town to a Roman colony with the right to strike coins. Sarmizegetusa and Apulum however already were Roman colonies so the reason to strike this type of coins in Dacia must have been a different one.</p>
<p>The reasons for minting were connected with the military actions against the Carpi⁵. The mint of Dacia as well as the one at Viminacium must have been a military one, responsible for the production of small change made of copper and brass. The mint of Dacia probably did not issued silver antoniniani as it was at Vimanacium but only copper and brass asses, dupondii and sestertii. The coins minted there are easy to recognise. On the reverse appears, a woman, probably the personification of the province of Dacia. She is usually holding 1 or 2 army standards and sometimes a typical Dacian sword, the phalx. On her left side stands an eagle with spread wings and a wreath in his beak. The eagle was the emblem of the legio V Macedonica which garrisoned at Potaissa (today Turda, Romania) approximately from 166 until 274. On her right side stands a lion which was the emblem of the legio XIII Gemina which stationed at Apulum (today Alba Iulia). On the reverse always appears the legend PROVINCIA DACIA. In exergue is inscribed the year of minting under the formula AN (ANNO) I–XI. The year I stands for the first year after the introduction of coinage and covered the period of the first day of the beginning of the coinage until the same date in the following year. The year I can thus be indicated as 246/247. The year II as 247/248 and so on. Also in the case of Dacia the precise date of the beginning of the local year is unknown⁷. Setting the 1st of January as the starting date of the local year gives many problems with the known chronology of the emperors. Also april the 1st, the date of the founding of the city of Rome, gives to many problems with this chronology. It seems likely that the beginning of the local year in Dacia also started somewhere between July the 1st and August the 1st as it did at Viminacium. It is</p>	<p>The reason for this coinage are most probably the military actions against the Carpi. Just as the mint of Viminacium the mint of Dacia must have been a military mint, responsible for the coinage of small change in the form of copper and brass coins. The mint of Dacia probably did not mint silver antoniniani as the mint of Viminacium did but only minted copper and brass asses, dupondii and sestertii. The coins minted in the Dacian mint are easy to recognise. The reverse of the coins show a woman who probably is the personification of the province of Dacia. She usually is holding 1 or 2 army standards and sometimes also a typical Dacian sword, the falx (ensis falcatus). On her left side stands an eagle with his wings spread and a wreath in its beak. The eagle was the emblem of the legio V Macedonica which was stationed at Potaissa (today's Turda) from approximately 166 until 274. On her right side stands a lion which was the emblem of the legio XIII Gemina which was stationed at Apulum (today's Alba Iulia). The reverse legend is always PROVINCIA DACIA. In the exergue on the reverse of the coins stands AN (ANNO) followed by a Roman numeral. This numeral stands for the local year in which the coin was struck. The year I stands for the first year after the beginning of the coinage and covered the period of the first day of the beginning of the coinage until the same date in the following year. The year I can thus be indicated as 246/247. The year II as 247/248 and so on.</p> <p>Also in the case of Dacia the precise date of the beginning of the local year is unknown. Setting the 1st of January as the starting date of the local year gives many problems with the known chronology of the emperors. Also April 1st, the date of the founding of the city of Rome, gives to many problems with this chronology. It seems likely that the beginning of the local year in Dacia</p>

<p>highly possible that also this mint did not hold strict control over this date. The new local year on the coins could have been used a little bit later or a little sooner. It is also highly probable that old reverse dies could have been used in combination with newer obverse dies of successive emperors.</p> <p>5 Cristian Găzdac, "Aspects of coin circulation in Roman Dacia", in Roman Coins outsider the Empire. Ways and Phases, Contexts and Functions, eds. A. Bursche, R. Ciołek, R. Wolters, Proceedings of the ESF/SCH Exploratory Workshop Radziwiłł Palace, Nieborów (Poland) 3–6 September 2005 (Wetteren: Moneta, 2008a): 288.</p> <p>6 Mariana Pîslaru, The Roman Coins from Potaissa legionary fortress and ancient town (Publicațiile Institutului de Studii Clasice 11), (Cluj -Napoca: Mega Publishing House, 2009).</p> <p>7 Ferenc Martin, Kolonialprägungen aus Moesia Superior und Dacia (Budapest: Akadémiai Kiadó, 1992): 7–9; Găzdac, Alföldy - Găzdac, "The coinage «PROVINCIA DACIA»", 248–249.</p>	<p>also started somewhere between July 1st and August 1st as it did in Viminacium. It is highly possible that also this mint did not hold strict control over this date. The new local year on the coins could have been used a little bit later or a little sooner. It is also highly probable that old reverse dies could have been used in combination with newer obverse dies of successive emperors.</p>
<p>According to the Roman numerals of the local year the mint of Dacia produced coins made of copper and brass until the local year XI (256/257)8.</p> <p>8 Cristian Găzdac, Agnes Alföldy -Găzdac, "The management of a monetary crisis? The "P M S COL VIM" and "PROVINCIA DACIA" coinages in the Roman monetary policy of the 3rd century AD", Numismatische Zeitschrift 116/117 (2008): 139.</p>	<p>According to the Roman numerals of the local year in the exergue on the reverse of the coins the mint of Dacia produced copper and brass coins until the local year XI (256/257).</p>
<p>In 246 actions commenced against the Carpi who had invaded the province of Dacia from the east. Because of these operations the province was filled with soldiers. To provide them enough of small change a mint was erected under the emperor Philip; this coinage was destined to the army. The above – mentioned actions were terminated in 248 but probably not to the satisfaction of the army. Philip did strike coins with the inscription VICTORIA CARPICA9 however the reality was that under Philip substantial parts of Dacia</p>	<p>In 246 actions commenced against the Carpi who had invaded the province of Dacia from the east. Because of these operations the province was filled with soldiers. To provide them of enough small change a mint was erected under the emperor Philip. The actions were terminated in 248 but probably not to the satisfaction of the army. Philip did strike coins with the text VICTORIA CARPICA but the reality probably is that under Philip substantial parts of Dacia were lost. Around this time the eastern limes Transalutanus was given up and large parts of today's</p>

<p>were lost. Around this time the eastern limes Transalutanus was given up and large parts of today Transylvania were abandoned by the Romans. In a small Roman auxiliary camp with vicus in today Ilisua, northern Transylvania, the coin finds end abruptly with coins of the emperor Philip¹⁰. The unsatisfying situation in Dacia and along the Danube limes were the reason for the rise of usurpers as Pacatian and maybe Silbannacus¹¹. When Decius was sent there to restore the order he was proclaimed emperor by the army. These events were the end of the reign of Philip.</p> <p>9 Harold Mattingly, Edward Sydenham, Carol Sutherland, Vivian Humphrey, Roman Imperial Coinage, vol. IV (London: Spink and son ltd, 1949), 65.</p> <p>10 Cristian Găzdac, Agnes Alföldy -Găzdac, "The Roman law against counterfeiting between theory and practice: the case of Roman Dacia", Acta Musei Napocensis 38 (2001): 140.</p> <p>11 Marcus Peter, "Ein Antoninian des Pacatianus aus Kaiseraugst", Schweizer Münzblätter 45, no. 179/180 (1995): 33–35.</p>	<p>Transylvania were abandoned by the Romans. <p>At the time when Dacian mint began to strike coins Philip II was still a Caesar. So on the coins struck in the local year I and II he is still named Caesar. It is generally accepted that he was elevated to the rank of Augustus by his father around August 247 so the coins from the local year II which show him as Caesar, must have been struck around the end of July or the beginning of August 247. After that the mint must have ceased striking coins in his name. No specimens exist with the local year II showing him as Augustus. So the first coinage in his name showing him as Augustus must have commenced in the local year III, that is as late as July 248.</p>	<p>At the time the mint in Dacia began to strike coins Philip II was still a Caesar. <p>Trebonianus Gallus came to power after Traian Decius and his son Herennius Etruscus were killed in the war against the Goths near Abritus. The events surrounding their deaths are not exactly known but there are two versions. One version is that Gallus had set a trap and betrayed Decius to the Goths in order to take over the power. Another version is that Gallus saved as much as he could after the battle with the Goths as a result of which he was proclaimed emperor by the military troops. Gallus wanted to depart for Rome as soon as possible to legitimize his position by the Senate. A quick peace was concluded with the Goths in which Gallus promised them large sums of money if they gave up their raids into Roman territory. This peace must have been unsatisfactory in the eyes of some of the legions, especially those in Dacia. The Dacian mint struck only coins in the name of Gallus in the local year V. Coins from the local year VI and VII are not known in his name. The mint of Viminacium struck more coins in his name but here the soldiers must have also become more and more disgruntled. When Aemilian seized the power in the Balkan area he must have had little difficulty to win the legions over to his cause. Soon the mints of Dacia and the mint at Viminacium started to strike coins in his name.</p>	<p>Trebonianus Gallus came to power after Traian Decius and his son Herennius Etruscus were killed in the war against the Goths near Abritus. <p>Only coins struck in the Dacian local year V are known in the name of Trebonianus Gallus and his son Volusian. One should noticed that Martin does mention a sestertius in the name of Volusian struck in the year VI. Supposedly coins in the name of Aemilian exist from the local year VII. Coins in the name of Aemilian with the local year VIII from the mint of Dacia are not that rare. His grasp for power must have had the approval of the legions in Dacia and after his successes against the Goths there must have been renewed necessity for money.</p> <p>20 Sestertius ANNO V – 250/251 vide Imhoof - Blumer, Pick, Regling, Münzer, Strack, Die Antiken münzen, 53; Martin, Kolonialprägungen, 5.55 var.; Varbanov, Greek Imperial Coins, 70.</p>	<p>http://www.viminacium.nl/English%20Dacia%20Aemilianus.html</p> <p>Only coins struck in the Dacian local year V are known in the name of Trebonianus Gallus and his son Volusian. Martin does however mention a sestertius in the name of Volusian struck in the year VI but the picture of the coin is not so clear. Supposedly coins in the name of Aemilian exist from the local year VII but until now i have never seen a clear specimen. The pictures on plate VIII in the book by Martin are also not very clear. Coins in the name of Aemilian with the local year VIII from the mint of Dacia are not that rare. His grasp for power must have had the approval of the legions in Dacia and after his successes against the Goths there must have been a renewed necessity for money.</p>
<p>The coins of Aemilian from Dacia were sestertii²¹. The sestertii depict a bust with a laurel wreath. Used notations of the local year: AN VIII, used from july 253 until august/september 253. <p>After being proclaimed by the army Valerian must have won over the troops at Viminacium a bit sooner than the troops left in Dacia by Aemilian. These troops probably remained loyal to Aemilian but could do nothing against Valerian because Aemilian had taken the majority of the army with him on his march against Gallus and Volusian. The only thing they could do was continuing the coinage in Aemilians name until the news of his defeat became known. During the local year VIII a coinage in the name of Valerian started which lasted until the local year XI. F. Martin²² mentions a sestertius in the name of Valerian struck in the year VII. The coins of Valerian from Dacia were sestertii²³. The sestertii depict a bust with a laurel wreath. Used notations of the local year: AN VIII, used from July 253 until July 254. AN VIII, used from July 254 until July 255. AN X, used from July 255 until July 256. AN XI, used from July 256 until July 257. <p>The coinage of “PROVINCIA DACIA” is a phenomenon that gives wide conceptual perspective. Precise dating and concrete iconographic pattern dedicated to specific economic situation in a particular area lead to the conclusion that the monetary series “PROVINCIA DACIA” are in fact a testament to real monetization of Dacia. Coins that originate from the cultural context with well documented place of provenance are the subject of research going far beyond iconographic, inscriptional studies as well as the analysis of punch marks. Establishing what was the role of coins in Roman society is of significant importance, especially if coins are one of the unquestionable achievements of ancient civilization.</p>
